Team Introduction

Deepest greetings Judges and sponsors. We are team CrtlAltExplore and we are here to present our software system.

Problem Statement 1

From USSD to MoMo App – Everyday Life Upgrade
Participants should deliver solutions that make the MoMo App a daily lifestyle companion, especially in health, agriculture, ticketing, transport and everyday living

Problem Statement 2

MoMo Without Borders – Lifestyle for All

Participants should design solutions that allow non-local users (e.g., diaspora, travelers, foreign workers) to create and use MoMo wallets for lifestyle needs

Solution Statement 1

We aim to create a financial health checker to help small businesses (local super markets, vendors) to keep track of the income vs the expenses of small businesses. At the end of the month it generates reports of how the business was perfromed.

Solution Statement 2

MoMo Without Borders – Lifestyle for All

Participants should design solutions that allow non-local users (e.g., diaspora, travelers, foreign workers) to create and use MoMo wallets for lifestyle needs

FinTech Implementation

In our solution we provide the ability to manage and track supplies of a business and also make online payments. We make use of the MTN MoMo Money API where any small business can create and request payment.

Lifestyle Services for Borderless Users: Features like sending money to family, paying bills across countries, managing travel budgets, or shopping globally.
